E-ARK Knowledge Centre

E-ARK Final Conference

6th-8th December 2016

National Archives of Hungary, Budapest

Knowledge Centre

- The Knowledge Centre (KC) is an **aggregator of services** developed under the scope of the E-ARK project
 - Services help to understand, contribute (**Resources Centre**) and validate (**Assessment Services**) Information Governance (IG) practices.
- KC intends to **harmonize** currently fragmented IG **knowledge** represented in the extensive collection of existing IG references (e.g. MoReq, ISO15489, ISO30300/15, ISO163637, ISO181288, etc.)

Resources Centre

Learn more about Information Governance terms, requirements and practices

Assessment Services

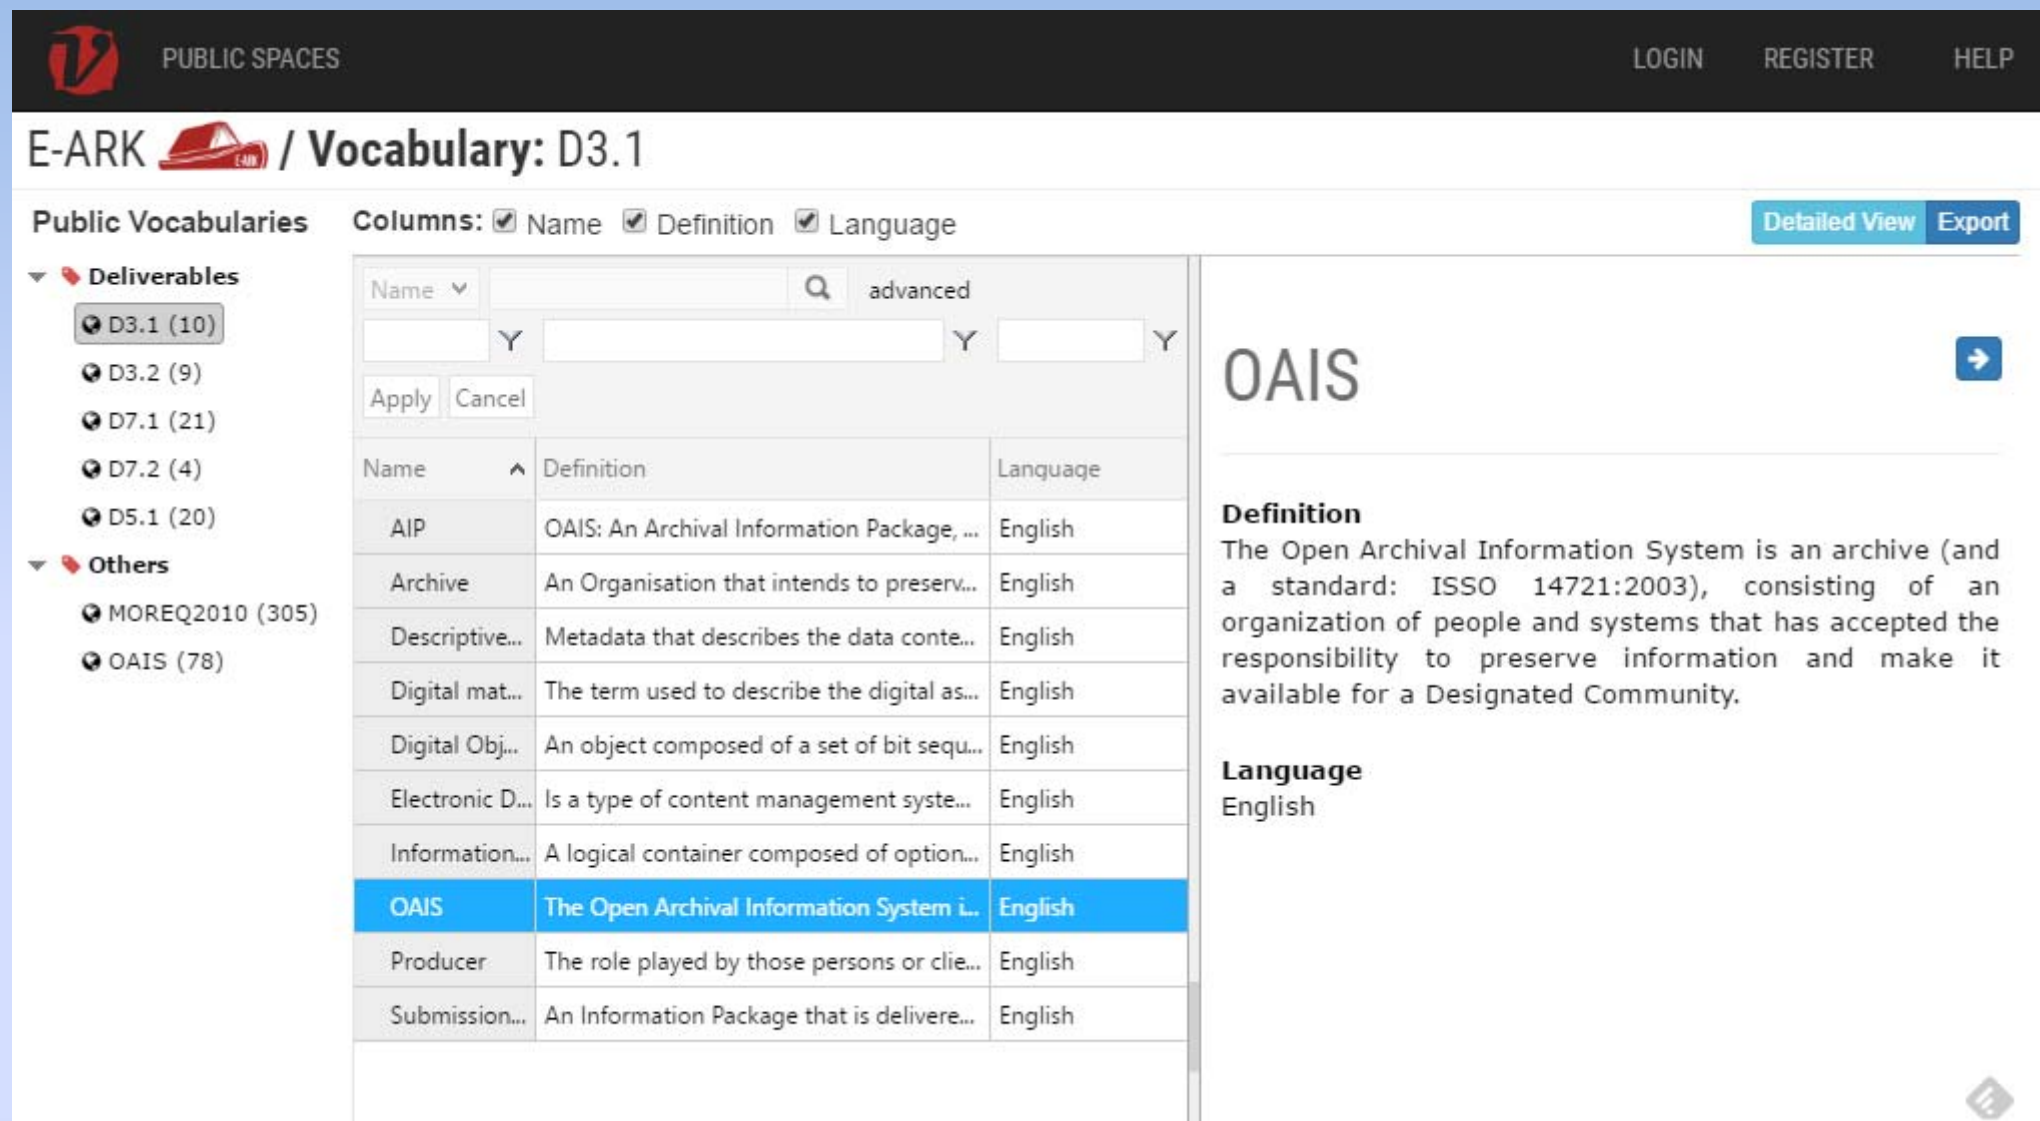

Assess your existing Information Governance practices

E-ARK Knowledge Centre

The E-ARK Knowledge Centre consist of a set of services that provide a comprehensive but simple and easily understood set of requirements for Information Governance. The requirements are elicited from existing reference documents. Organisations of any kind may use the services:

- › To support the definition of Information Governance practices
- › To assess existing Information Governance practices
- › To contribute to the existing body of knowledge of Information Governance
- › As a reference glossary for Information Governance terms and their meanings
- › As a guide to improve existing Information Governance practices
- › As a reference source for learning more about Information Governance

Path: 2 Fundamentals of an MSR > 2.6 Role of top management

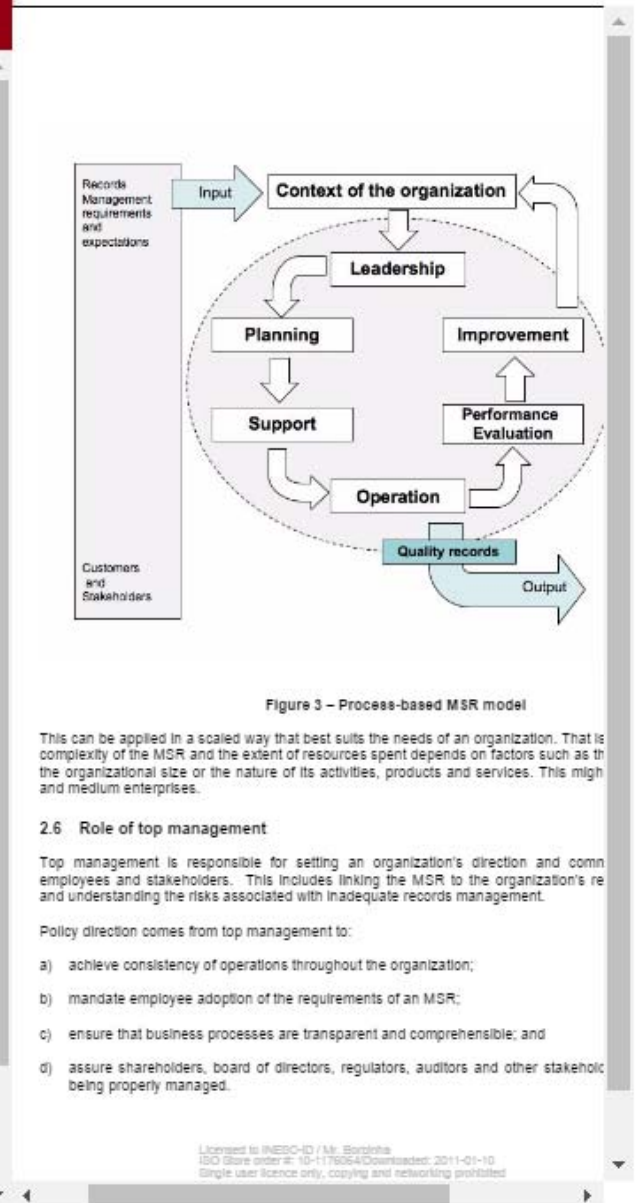

Top management is responsible for setting an organization's direction and communicating priorities to employees and stakeholders. This includes linking the MSR to the organization's requirements and goals, and understanding the risks associated with inadequate records management.

Policy direction comes from top management to: a) achieve consistency of operations throughout the organization; b) mandate employee adoption of the requirements of an MSR; c) ensure that business processes are transparent and comprehensible; and d) assure shareholders, board of directors, regulators, auditors and other stakeholders that information is

being properly managed.

Through visible leadership and accountability, top management creates an environment in which an MSR can operate effectively. The principles of the MSR (see clause 2.4) are used by top management as the basis for its role to:

- 1) establish, maintain and promote the records management policy and objectives to increase organizational awareness, motivation and conformance;
- 2) ensure that records management responsibilities and authorities are defined, assigned and communicated throughout the organization;
- 3) ensure that an effective and efficient MSR is established, implemented and maintained to achieve the organization's objectives;
- 4) ensure the availability of the necessary resources and competencies to support and sustain the MSR;

Path: Part One – Core Services > 7. Model Metadata Service > 7.5 Functional Requirements

R7.5.01

Each **Metadata service** must manage **Metadata element** definitions ([E14.2.11](#)) with the following **System metadata**:

- **System Identifier** ([M14.4.100](#)),
- **Title** ([M14.4.104](#)),
- **Description** ([M14.4.16](#)),
- **Scope Notes** ([M14.4.97](#)),
- **Presentation Order** ([M14.4.84](#)),
- **Min Occurs** ([M14.4.56](#)),
- **Max Occurs** ([M14.4.53](#)),
- **Is Modifiable Flag** ([M14.4.46](#)),
- **Is Entity Reference Flag** ([M14.4.45](#)),
- **Entity Reference Type Identifier** ([M14.4.24](#)),
- **Datatype** ([M14.4.10](#)),
- **Is Textual Flag** ([M14.4.47](#)),
- **Default Value** ([M14.4.13](#)),
- **Default Language Identifier** ([M14.4.12](#)), and
- **Retain On Destruction Flag** ([M14.4.88](#)).

Metadata element definitions also have:

- **Event history** (see [2. System Services](#)).

MoReq Schema Validator

The MoReq Validator was developed under the project E-ARK.

MoReq®, MoReq2® and MoReq2010® are registered community trademarks

The MoReq® specification is produced by the DLM Forum

MoReq Export Validation

This services aims to validate data files according to the XML Export Schema as defined [here](#).

The requirements of the Export Service define how entities must be exported by a MoReq-Compliant Records System (MCRS). These requirements are agnostic about the technical representation of the data, but meanwhile the DLM Forum also defined the MoReq2010 XML Schema, which is the reference XSD for this service.

This service therefore accepts the upload of an XML file, analysis it according to this XSD, and provides a report.

Examples for testing are available [here](#) 

Select file to validate:

SEARCHING AND REPORTING

Test Cases

- 1.1 Initial error check
- 1.2 Initial compliance check
- 1.3 Browse available services (or bundles of services) and inspect the metadata of the user and group service
- 1.4 Modify the metadata of the user and group service
- 1.5 Browse the event history of the user and group service
- 1.6 Find and inspect Usr.1.1, Usr.1.2, Grp.1.1 and Grp.1.2
- 1.7 Browse the entity types in the user and group service
- 1.8 Browse the function definitions for an entity

Test Case:1.1 Initial error check

< PRE-CONDITIONS STEPS EXPECTED RESULTS >

Test system is operational

Test data (see appendix 1.A Test data) are loaded onto test system

Where the test system uses an API then a suitable test harness has been provided (see the Test Framework: Overview and Instructions, 4.1 Providing a test harness for API interfaces)

The test system has been configured, under R2.4.13 such that performing any function system wide will generate an event under R2.4.15 and R2.4.16 - in other words, all function definitions must have their Generate Event Flag (M14.4.34) set

The test system has been configured, under R2.4.20 such that the events generated by all functions system wide will be retained by residual entities - in other words, all function definitions must have their Retain On Destruction Flag (M14.4.88) set

If the model role service is implemented then the test system has been configured, under R4.5.8 such that every access control list is set to inherit all roles, not just administrative roles - in other words, the Include Inherited Roles Flag (M14.4.43) for all access control lists for all entities is set by default

admin ▾

Pre-Ingest: 4 / 4 ✓

Ingest: 13 / 14 !

Archival Storage and Preservation: 4 / 7 !

Data Management: 3 / 3 ✓

Access: 2 / 7 !

Total: 26 / 35

Finish

2.1 - General pilot model and use case definition.

✓ 1 - Is there a procedure to negotiate the terms of deposit between the Producer and the Archive?

Objective: Understand if the Archive is capable of negotiating the terms of deposit with Producers. Terms of deposit might include the specification of the metadata that must be included at the time of deposit, the schedule and method of deposit, the responsibilities of the Producer and the Archive regarding the information being ingested, etc.

- No: There is no procedure to negotiate the terms of deposit
- Ad-hoc: There is an ad-hoc procedure to negotiate the terms of deposit
- Defined: There is a defined procedure to negotiate the terms of deposit
- Defined and assessed ad-hoc: There is a defined, documented and ad-hoc assessed procedure to negotiate the terms of deposit
- Defined and assessed consistently: There is a defined, documented and consistently assessed procedure to negotiate the terms of deposit

Comment:

✓ 2 - Does the Archive validate if the Producer SIP complies with the defined format and structure specifications?

Objective: Understand if the Archive validates the Producer SIP regarding format and structure. If the SIP has deviations the Archive might reject the SIP and request the Producer to deliver a corrected SIP.

Terms: Producer SIP

- No: The Producer SIP is not validated.
